BOWLING
How many pins can you knock down?

Big Idea:
Support hand eye coordination and simple math concepts.

Materials:
• 10 plastic cups
• Ball
• Paper and pencil

Directions:
1. Find a hallway in your house; tape a line across one end of the hallway.
2. On the other end of the hallway, set up your cups as bowling pins (four cups in a row, followed by three, then two, then one).
3. Stand on the line and roll a ball down the lane, try to knock down the cups.
4. Use a pencil and paper to keep track of how many cups you knocked down. You can use tally marks or numbers. See if you can knock down all 10!
